"When I see an Alfa Romeo. I lift my hat." Henry Ford
Few things ignite such reverence as a classic car. With more than 250 iconic models from the 1940s to the 1980s, photographed from every angle, this title is a glorious celebration of the stars in the classic car firmament. Edited by award-winning automotive journalist Giles Chapman, Classic Car brings you the story of more than 20 great marques, including household names Bentley, Mercedes, Ferrari, Cadillac, and Aston Martin. Its lavish photography reveals every detail in close-ups of models that range from the 1940s giant two-ton Daimler DE36, which ferried royals about in style, through to sleek Ferraris from the 1980s capable of smashing the 200mph barrier. It puts you in the driving seat of such icons as the Chevrolet Corvette, the Ford Thunderbird, and the Mercedes 300SL and brings you the designers of these amazing machines and the story of their manufacturers. Whether you dream of owning one of these super-cool cars or you are a collector already, Classic Car is set to become a treasured favorite.

Analysis, Design and Evaluation of Human-Machine Systems is a proceedings volume from the 8th IFAC/IFIP/IFORS/IEA Symposium held in Kassel, Germany from 18-20 September 2001. The Symposium is the eighth event in this prominent series of international conferences covering the multidisciplinary area of Human-Machine Systems. Sponsored by leading international organisations including IFAC and IFIP, the symposium recognises the enormous practical role for human-machine systems in a wide range of industrial and social applications. Human-centred designs and human-centred automation are important forces in developing the symbiosis between human society, nature and artifacts. In increasingly complex systems they are necessary for achieving higher efficiency, safety, performance, and satisfaction. Technological developments will increasingly only be successful if end-user participation and acceptance are guaranteed early in the life cycle. Multimodality and multimedia-based interaction styles are becoming more creative and flexible, while cultural and organisational aspects are becoming more important. These and several other issues are covered in this Proceedings, which will form an indispensable resource for engineers working on any project where human-machine interfaces are a key issue. Altogether over 90 papers are presented, including plenary contributions by leading world experts.

This volume supplies cost of living information from major cities worldwide. There are reported prices for products and services drawn from a variety of sources, including statistical reports, association databases and periodical literature.
